

ROBINSON'S SEEDS & PLANTS SEASON 2024

Established 1860

Growing and Showing Vegetables for 163 years

'For edibles which taste as good as they look'.

Newly planted Mammoth Blanch Leek

Trays of young plants on the nursery.

Welcome to our 2024 season catalogue.

2023 was certainly different. Queen Elizabeth passing giving us a new King and Queen, and 3 bank holidays in May, Temperatures in the 20's during late May and the hottest June on record, working in the greenhouse and garden became a morning and evening job. However, despite the years problems excellent results have again been reported. A shortage of vegetables has meant many new gardeners are trying 'Grow your Own' for the first time.

There have been some fine onions grown from the Mammoth Improved and Mammoth Red varieties. Leeks have grown well but do prefer a cooler climate. For cultivation hints read on in the catalogue. Our cultivation hints booklet has proved very popular, it gives hints on all types of vegetable cultivation, whether for exhibition or for the kitchen, cultivation hints are also available on our website.

Once again vegetables which are grown during the summer and harvested for storage or left growing through the winter are popular. Kale is ideal for cut and come again use in the winter, are full of vitamins and can easily be grown in containers. Chillies are still as popular; they make a wonderful conservatory or window ledge plant and are very easy to grow. We have varieties differing in heat intensity from mild to extremely hot.

Shipping costs for plants, potatoes and sets has increased but we have kept the postage cost for seed the same as last year. Hopefully by April 2024 we can send plants to Northern Ireland.

Please be aware that from 2024 compost is now all peat free. This means a different approach is required. Small seeds can struggle in rough compost so follow the golden rule 'Seeds should be covered the depth of the seed'. To help the seed germinate ensure the compost is fine enough for sowing and water properly. Establish a feeding plan which is appropriate to the vegetable variety to achieve successful results.

Our Potato Weekend for 2024 will be held on 3rd and 4th of February for further details ring the nursery or visit our website or Facebook page.

The nursery is open every day from March to June for all your vegetable seed and plant needs, then Monday to Friday only from July. We have many varieties of tomatoes, chillies, cucumbers, brassica plus of course our famous onions and leeks. For the later months we have plants suitable for overwintering including kales, purple sprouting broccoli, leeks, spring cabbage, garlic and autumn planting onion sets. July to February **See opening hours on the back of the catalogue.**

To order online go to www.mammothonion.co.uk or our Facebook page for up to date info on life at the nursery and for pictures of our displays at the flower shows we visit.

OUR HISTORY,

Our founder, William Robinson, started the nursery in 1860. At that time the nursery grew a very different range of crops, ranging from soft fruit, apples, plums and pears, to onions, leeks and all the usual vegetables of the time. He also kept cows and horses to use on the smallholding.

The next generation, also called William Robinson, started to improve the size of onions and leeks. This was done and still is by selection. Only the best specimens were allowed to seed. He started to exhibit the results in the local Flower Shows of the time, winning many prizes. Soon other exhibitors wanted to grow the strain and the vegetable business as we know today was born. He called all his large varieties by the prefix Mammoth. Many of the unusual and heritage vegetables grown on the nursery come from these early days.

In the 1950's and 60's the 3rd generation, William Martin Robinson, brought the large strains into the forefront of exhibition varieties. He was awarded the Royal Horticultural Societies Victoria Medal of Honour in 1979 and in 1986 made a Fellow of the Institute of Horticulture. He was instrumental in the foundation of the National Vegetable Society and for many years their Chairman and President. In 1972 all the varieties were registered under the EU rules as distinct and could now be sold in Europe.

The nursery is now run by the 4th and 5th generation who continue with the tradition of quality vegetables which taste as good as they look. We are pleased and proud to be a true family business on the same site where our ancestors started the nursery.

The ground where we grow our exhibition vegetables is prepared using natural products and the same formula as 163 years ago.

CATALOGUE PRICES CORRECT TO JULY 2024 - POSTAGE COSTS TO APRIL 2024

We hope the following hints will aid the growth of your onions. Our methods have remained unaltered since the early 1900's. For further hints on all vegetable cultivation go to www.mammothonion.co.uk

Mammoth onions are best sown from late December to late February. A tray 30cms X 30cms will hold approx.100 seeds. Using John Innes sowing compost sow the seeds and cover with the same compost. Germination should take approximately 2 weeks at a temperature of 13deg C. Keep the seeds moist but never over water at this stage. We have found that a higher germination temperature will in many cases damage the seeds, thus giving poor results. After germination and when the seedlings are at the 'crook' stage, transplant the young seedlings into stronger John Innes compost. At this stage individual pots may be used. Lift the seedlings gently as they are very easily damaged. Water only when the seedlings require it. Botrytis at this stage can be devastating so ventilate on all possible occasions but still keep the temperature at 13deg C. Transfer the young plants out of the greenhouse to a cold frame during Mid to Late March. This ensures the plants are well hardened off prior to planting outdoors from Late April. Planting times will vary according to the area and conditions at that time. Onions grown for exhibition will benefit from being covered by cloches at this time. The smaller onions both red and white varieties are grown using a similar method. They can however be sown later.

Choose an open site with good drainage. For exhibition onions, trench 50cm deep. Fork up the bottom of each trench if solid. Into every 3sq metres of the bed work the following:- 4 Forkfuls of pea, bean or tomato haulms. 1 garden barrow of well-rotted farmyard manure. 140gms Bonemeal. 170gms Sulphate of Potash. First scatter the haulms at the bottom of the trench, and then mix the fertiliser into the bed. It is essential that the greater proportion of the manure should be near the top of the bed, some within 10cms of the surface. This will enable the roots to come into contact with the manure during the early stages of growth. This work is best done in the Late Autumn or Early Winter when reasonably dry. The bed can then be left rough over the winter period. In March work the top into a fine tilth adding the following to an area of 3sq metres. 55gms Superphosphates. 28gms Hydrated Lime or Seaweed Meal. (amounts can vary according to soil type and whether the onions are to be grown for exhibition or kitchen, exhibition ground tends to be acidic quicker than general ground, hence the need for Lime or Seaweed Meal. On ground for general vegetables this need only be done every third year on exhibition ground every year.)

There is no need to firm the ground unless it is very light. When conditions allow, and this will depend on several factors, plant out the now hardened off onion plants. The usual time for planting is Mid April to Mid-May. An advantage is gained by the use of cloches both before and after planting. Cloches used prior to planting will warm the ground giving less chance of a check in growth at this time. Care should be taken after planting not to leave covers over for too long. We have found that 3-4 weeks is sufficient.

Onions can be grown on the same ground for many years; our own onion bed is now 140 years old and has grown onions continuously for this time. However a strict health routine must be followed if you require using the same ground again and again. If any onions are suspect always remove not only the plant but also a small amount of soil from where the onion was growing. Hopefully this will remove any unwanted bacteria in the soil. If the onions are required for general kitchen use or it has not been possible to prepare the ground in the autumn we suggest the following. When possible work into the ground one barrowful of farmyard manure to 3sq metres. Prior to planting add a good general fertiliser, we use Vitax Q4. Seaweed Meal can be added at this time. During the growing season never allow the onion bed to become dry, especially during June and July when the onions are growing well.

The planting distance for onions can vary according to the result required. For exhibition we suggest a planting distance of no nearer than 30cm X 30cm, for kitchen use this may be reduced to 20cm X 20cm. Feeding onions on established beds should not be necessary. Feeding on ground, which has been cultivated for a number of years, can do harm. If feeding is required it must be done in the early season. Over feeding can result in onions with thick necks and poor keeping qualities. Water on all occasions when onions are dry. Onions will store better if harvested with a little growth left in the plant. For exhibition lift the onions 10-14 days prior to the show to give the bulb time to dry. Cut the root and top off, leaving enough top to tie down for the show bench. Remove any dead or broken skin and leave to dry in a warm dry area. A greenhouse is ideal for this purpose. Exhibitors will after 7 days be able to turn the tops over for good presentation. For tying down we have found that rubber bands work very well. As the neck of the onion shrinks so does the rubber band, this avoids re-tying. For kitchen use the onions once dry can be stored in a cool but frost free shed or garage.

Leeks are propagated in the same way as onions using the same compost and greenhouse temperature. We do not advise sowing before the 3rd week in January; this avoids the risk of running to seed later in the season. Leeks benefit from a second potting in the third leaf stage. We suggest the leeks be planted outside two weeks after the onions. Again an advantage is gained by giving protection after planting. Trench and manure the same as for onions when growing for exhibition, but use only half the amount of Bone Meal and Sulphate of Potash. For exhibition do not plant in trenches but on the flat no nearer than 30cm X 30cm.

For kitchen use, leeks may be planted from late April to late June. The traditional method of dropping the leek plant into a 12cm hole may be used. If feed is needed, use the same as for onions but leeks may be fed until later in the growing season.

When growing leeks for exhibition the method of blanching is really one of personal preference. The method we have used historically is one now used by most exhibitors. The leek is planted on the flat and allowed to grow for several weeks. When the plant is large enough a land tile or piece of drainpipe is placed over the top of the plant. There should be 3 or 4cms of leaf showing out of the top. Never fill this tile or pipe with peat etc., as the leek will fill this as it grows. A land tile is used for draining land but these are becoming difficult to obtain so the drainpipe is a useful alternative and should be cut to 30cms tall. For extra blanch a larger tile or pipe is placed over the top and the inner one drawn up supported by peat at its base. This forms a telescope action and the inner tile can be continued to be lifted as required.

A QUICK GUIDE TO WHAT AND WHEN IN THE VEG PATCH

JANUARY Sow Mammoth onions. Sow Mammoth leeks from the 3rd week. Sow salad vegetables for growing in heated greenhouse. Give the spring cabbage planted last autumn a high nitrogen feed. Check crops in store.

FEBRUARY Sow smaller varieties of onions and leeks. Sprout 1st early potatoes. Sow early tomatoes, chilli, sweet peppers and aubergine. Give all overwintered onions and garlic a top dressing of general fertilizer.

MARCH Sow Jolant and Lancaster leeks, early lettuce, chilli and sweet peppers, aubergine and brassica. Outdoor tomato varieties can be sown.

APRIL Plant exhibition onions and leeks outdoors. All vegetable plants can now be planted outside once plants become ready. Sow leeks and winter brassica indoors for planting later.

MAY From mid month plant tomatoes outdoors and courgettes if danger of frost has gone. Sow salad crops in succession. Courgettes, marrows, squash and pumpkin planted. Water all crops when necessary. Check for pests and treat as needed. Peas and beans may now be sown direct outdoors.

JUNE Make sure exhibition vegetables are kept watered. Plant 1st winter vegetables. Keep good water supply to all varieties of beans to help with setting.

JULY Lettuce sown outdoors. Sow 1st winter lettuce. Spring cabbage sown. Plant winter vegetables including the overwintering onion sets. 2nd crop potatoes. Harvest small onions. To have good quality dry onions, harvest early. Pull the

onions and cut the tops off, approx 10cm above the bulb for small onions and 15cm for the large. Take off the root and any split skins. Dry indoors (dry shed or greenhouse bench). Wait until the outer skin is dry, store in a cool dry airy place. Do not leave onions outside once pulled; this will affect the keeping qualities.

AUGUST Harvest large onions and tender crops prior to frost. Sow winter salad vegetables. Plant overwintering onion sets from end of month. Move late planted potatoes under protection.

SEPTEMBER Garlic, over wintering onions and Spring Cabbage planted. Prepare exhibition onion and leeks ground for following season. Sow winter salad greens in greenhouse.

OCTOBER Tidy vegetable plot of any debris.

Clean greenhouse. When composting garden refuse, do not compost any with disease. Tomato and potato tops which have had blight must be disposed of or burnt not composted. Harvest carrots and beetroot and store in a cool area.

NOVEMBER Wash canes and pots to remove insects. Red Spider mite will overwinter in canes. Check stored onions for decay.

DECEMBER Boxing Day the traditional day for sowing Mammoth Onions. Review the year's crops and make notes for new season

POTATO WEEKEND AT THE NURSERY

**Sat 3rd & Sun 4th
FEBRUARY 2024**

10am-2pm

Over 60 varieties to choose from.

Planting advice on all types of
vegetables given.

Also available will be early seedlings
of our mammoth onions, leeks and
many types of vegetables for your
greenhouse, as well as our full range
of seeds.

NEW FOR 2024

PERFECTION CUCUMBER

order code 0110

Dark green fruit suitable for growing outdoor
or in a polytunnel. **10 seeds £2.50**

GHERKIN NATIONAL

Order code 0113

Fast growing small cucumber suitable for
pickling. **10 seeds £2.50**

ARCTIC KING/MARVEL OF 4 SEASONS LETTUCE

order code 0154

Mix of two varieties both winter hardy. Small
compact heads forming a small heart.
50 seeds £2.00

WINTER DENSITY LETTUCE

order code 0155

Semi-cos variety producing dark green
leaves. Frost tolerant and ideal for autumn
sowing. **100 seeds £2.00**

CORN SALAD VIT

order code 0156

Produces oval green leaves a good variety
for spring and autumn harvest. Will
overwinter. **100 seeds £2.00**

BIG JIM CHILLI

order code 0194

Large green fruit approx. 25cm which ripens
to red. Medium Hot. **10 seeds £2.10**

BASKET OF FIRE F1 CHILLI

order code 0197

Short bushy plant which can be grown in a
hanging basket. Ripens to red. Very hot.
10 seeds £2.10

RADISH CHINA ROSE

order code 0241

Long roots with a good flavour. Sow from
March.

100 seeds £2.00

POPCORN ROBUST

order code 0247

Produces bright yellow/orange kernels which
should be dried for 3 – 4 weeks before use.
25 seeds £2.50

COCKTAIL CRUSH TOMATO

order code 0268

A blight resistant variety producing a classic
salad tomato with a great flavour.

7 seeds £3.50

INDIGO BLUEBERRIES TOMATO

order code 0272

Cherry sized fruit which ripens to purple
7 seeds £2.25

PINSTRIPED AUBERGINE

order code 0025

Compact plant producing purple and white
striped fruit, superb flavour.

10 seeds £2.25

Pinstripe

ALLIUM- Onion and Leek

For plants see order codes

S1-16 or P1-33

MAMMOTH IMPROVED ONION

H

order code 0001

Grown for many years this onion has now reached a high standard of vigour and uniformity. May be grown to over 2kg and 60cm circumference, and has a very sweet flavour.

The 'exhibitors' onion, winning many prizes from the late 1800s to the present day,

100 seeds £4.00

RIJNSBURGER ONION

order code 0002

A tennis ball size golden coloured onion, strong in taste. Will store from August through the winter till March.

100 seeds £2.25

GOLDEN BEAR F1 ONION

order code 0003

Will produce good sized bulbs. High tolerance to downy mildew and botrytis, white rot resistant.

50 seeds £2.75

Golden Bear

AILSA CRAIG ONION H

order code 0004

Will produce a mild sweet onion of medium size. **100 seeds £2.25**

SANTERO F1 ONION

order code 0005

Produces good sized bulbs. Resistant to Downy Mildew. **50 seeds £2.50**

Santero

MAMMOTH RED ONION

RHS HC # H

order code 0006

This is the largest red onion in cultivation, has excellent keeping qualities and is famous for its strong taste. **100 seeds £3.25**

RED BARON ONION RHS AGM

order code 0007

A tennis ball size onion with deep red skin has attractive red internal colour which makes it ideal for salads. Will store after harvesting through the winter till March.

100 seeds £2.25

Red Baron Onion

Keravel Onion

KERAVEL (Rose of Roscoff) ONION

order code 0008

H

We are pleased to offer seeds of this pink 17th century French Heritage variety. Has given good results with a superb flavour.

50 seeds £2.95

LONG RED FLORENCE ONION H

order code 0009

A tall almost oval shaped onion with pink skin and a mild flavour. **50 seeds £2.50**

Long Red Florence

Tosca

TOSCA ONION

order code 0010

A tall almost oval shaped onion with golden skin and a mild flavour.

50 seeds £2.50

SENSHYU YELLOW ONION

order code 0011

Seed of this autumn planting variety. Flat onion with golden skin.

100 seeds £2.50

Sets available from September.

Senshyu Yellow

TOUGHBALL F1 ONION

order code 0012

Maturing early summer. Produces very uniform, round medium sized globes with strong skin. Firm flesh, high yielding and strong against bolting. Good variety for exhibition. Sow July-September.

100 seeds £2.50

WHITE LISBON Spring Onion

RHS AGM # H

order code 0013

Will produce good white lengths. Ideal for salads. Good for early and successive sowings

100 seeds £2.00

REDBEARD Spring Onion

order code 0014

Strong flavour with good stems of red. Sow from January under cover.

100 seeds £2.00

PARIS SILVERSKIN Spring Onion H

order code 0015

White Salad onion which will produce a small bulb at base. May be left to grow to produce pickling onions.

100 seeds £2.00

Paris Silverskin

AMBITION F1 SHALLOT

order code 0016

A red shallot which may be grown from seed. Sown directly outdoors or in trays.

50 seeds £2.50

Ambition Shallot

Zebrune Shallot

ZEBRUNE SHALLOT AGM

order code 0017

Banana shallot from seed with good resistance to bolting. Produces brown bulbs with pink tinge.

50 seeds £2.50

MAMMOTH BLANCH LEEK RHS AGM

order code 0018

H

A superior exhibition variety with an extra long blanch, very tall, may be grown to over 3kg. Excellent flavour for kitchen use. Frost hardy.

100 seeds £3.50

Order online at mammothonion.co.uk

MAMMOTH POT LEEK RHS AGM # H **order code 0019**

A true pot leek, very broad flags with a short blanch of 14cm. Bred for the exhibitor, but with excellent flavour and tight flesh is ideal for the kitchen. One of the easiest leeks to grow, very frost hardy. **100 seeds £3.50**

JOLANT LEEK RHS AGM **order code 0020**

A fine growing frost hardy leek, ideal for kitchen use during winter months.
100 seeds £2.25

LANCASTER F1 LEEK **order code 0021**

Late season variety. Dark green foliage with erect leaf habit and excellent uniformity. Frost hardy and bolt tolerant.
50 seeds £2.25

NIPPER LEEK **order code 0022**

Specially bred to produce quick growing baby leeks. Can be ready in 10 weeks from sowing and may be grown in containers.
100 seeds £2.00

AUBERGINE

MONEY MAKER F1 Aubergine **order code 0023**

Long purple fruit with good flavour. Tall plant.
10 seeds £2.25

Money Maker

Farmers Long

FARMERS LONG Aubergine **order code 0024**

Long slender lilac fruit, on medium height plant mild flavour.
10 seeds £2.25

PINSTRIPE Aubergine New **order code 0025**

Compact plant producing purple and white striped fruit, superb flavour.
10 seeds £2.25

BABY BELLE Aubergine **order code 0026**

Produces small round purple aubergines with lovely flavour. Compact plant.
7 seeds £2.50

BEANS - All types

LAB LAB BEAN RUBY MOON **order code 0027**

Striking purple flowers and beans. The Lab Lab bean is a tender plant and is best grown indoors or in a sheltered position in cooler areas. **10 seeds £2.50.**

YARD LONG CLIMBING BEAN **order code 0028**

Also known as the asparagus bean. Produces very long beans with fine flavour. Is best grown under protection.
25 seeds £2.25

Yard long

Edamame

EDAMAME BEAN SILVAKA **order code 0029**

Edamame Beans (Soya Bean) are an excellent source of protein. Can be eaten boiled, steamed or stir fried. In all these forms they are delicious and nutritious. They give you a long crop from late summer to autumn when grown in a sunny site.
30 seeds £2.50

ROB ROY # H CLIMBING FRENCH BEAN

order code 0030

A climbing French bean, cream background splashed with red. Very tender when cooked, having an excellent taste. Older pods may be shelled. Very attractive, ideal for containers on the patio. **25 seeds £2.25**

Rob Roy

ROB SPLASHED # H CLIMBING FRENCH BEAN

order code 0031

A climbing French bean, cream background splashed with Purple. Very tender when cooked, the older pods may be shelled. Good flavour. Very colourful, ideal for containers. **25 seeds £2.25**

Rob Splashed

Order online at mammothion.co.uk

KINGSTON GOLD RHS AGM # CLIMBING FRENCH BEAN

order code 0032

Has cream/yellow pods which are very tender with a very buttery taste. The plants produce a large crop from top to bottom, very suitable for containers. **25 seeds £2.25**

Kingston Gold

COSSE VIOLETTE H CLIMBING FRENCH BEAN

order code 0033

Producing long tender purple pods. The beans revert to green when cooked. Makes an attractive addition to the garden. **25 seeds £2.10**

Cosse Violette

KENTUCKY WONDER H CLIMBING FRENCH BEAN

order code 0034

Produces lots of green, very fleshy pencil podded beans of good flavour. Freezes well. Will keep cropping over a long period. **25 seeds £2.10**

MIXED PACKET OF CLIMBING FRENCH BEAN

order code 0035

Kingston gold, Kentucky wonder and Cosse Violette

40 seeds £3.00

THE HUNTER RHS AGM CLIMBING FRENCH BEAN

order code 0036

Flat tender green beans. Mild flavour. Suitable for growing under poly-tunnels or greenhouses. **25 seeds £2.10**

COBRA CLIMBING FRENCH BEAN

For indoor or outdoor production. Long, straight, round fine pods with smooth exterior. Can be harvested over a long period. Ideal for the show bench.

25 seeds £2.10 order code 0037

50 seeds £3.00 order code 0038

PURPLE TEEPEE DWARF FRENCH BEAN

order code 0039

Dwarf plant with striking purple beans appearing above the foliage.

40 seeds £2.10

FARADAY DWARF FRENCH BEAN

order code 0040

Faraday is one of the best new Dwarf French Beans available for some time. It produces excellent uniform pencil pods which are 6-8mm in diameter and 13-15cm long.

Resistant to Halo blight, Anthranose and BCMV. **40 seeds £2.10**

Faraday

THE PRINCE RHS AGM DWARF FRENCH BEAN

order code 0041

Dwarf French Bean producing good quality pencil podded beans. Stringless when picked young. **40 seeds £2.10**

ORINOCO DWARF FRENCH BEAN

order code 0042

Straight golden yellow beans on a dwarf plant. Good resistance to Common Mosaic Virus, Anthranose and Halo blight. Sweet flavour. **40 seeds £2.10**

Orinoco

MIXED PACKET OF DWARF FRENCH BEANS

order code 0043

Faraday, Purple Teepee and Orinoco. **60 seeds £3.00**

Mixed Dwarf

LIBERTY RUNNER BEAN RHS AGM

H

This superior quality runner bean has given great satisfaction and produced many outstanding crops, for either exhibition or table. Produces very long beans with smooth thick tender flesh. Red Flowered.

10 seeds £1.75 order code 0044

20 seeds £2.95 order code 0045

WHITE LADY RUNNER BEAN order code 0046

Produces long smooth pods with good flavour. Pure white flower. **15 seeds £2.00**

White Lady

HESTIA DWARF RUNNER BEAN order code 0047

A dwarf runner bean with red and white flowers. Very suitable for container and patio growing. **25 seeds £2.00**

Hestia

MARTOCK BROAD BEAN H order code 0048

A heritage variety which dates back to the 1300's. Medium tall plant, small pods of a mealy taste. **25 seeds £3.00**

GRANDO VIOLETTO BROAD BEAN H

order code 0049

Unusual variety. The beans turn to purple on maturity, pods remain green. Medium tall with good flavour. **25 seeds £3.00**

Grando Violetto

RED/CRIMSON FLOWERED BROAD BEAN H

order code 0050

Heritage variety dating back to the 1800's medium tall, small upright pods with excellent flavour. **25 seeds £3.00**

Red/Crimson

Flowered

AQUADULCE CLAUDIA BROAD BEAN H

order code 0051

Ideal for autumn/winter sowing. Tall bean with long pods. **25 seeds £2.50**

RED EPICURE BROAD BEAN H

order code 0052

Unusual tall variety with pink seeds which keep their colour when cooked. Good flavour.

25 seeds £2.50

Red Epicure

BUNYARDS EXHIBITION BROAD BEAN H

order code 0053

Tall growing, producing a heavy crop of long beans with sweet taste, may be sown Spring or Autumn. **25 seeds £2.50**

THE SUTTON BROAD BEAN H

order code 0054

Dwarf variety producing a good crop of quality beans. No need to support.

25 seeds £2.50

BRASSICA

Brussels Sprouts- Broccoli- Cabbage- Cauliflower- Kale.

HISPI F1 CABBAGE

order code 0055

A small pointed cabbage with sweet flavour. May be sown from February to July.

20 seeds £2.25

MINICOLE F1 CABBAGE

order code 0056

Will produce very small heads of tasty cabbage. **20 seeds £2.25**

STONEHEAD F1 CABBAGE

RHS AGM

order code 0057

Versatile round cabbage for Summer or Autumn use, will mature in 80 days. Very solid hearts, excellent flavour, mildew resistant. **50 seeds £2.25**

ROBINSONS CHAMPION GIANT CABBAGE # H

order code 0058

A giant round cabbage which matures during the Autumn, has an excellent full flavour ideal for coleslaw or cooking. Amazing sizes may be grown from this variety. **30 seeds £2.75**

Giant Cabbage

ROBIN F1 CABB AGE RHS AGM

order code 0059

A winter hardy January King type has a wonderful flavour. Robin may be left outside until needed, frost hardy. **30 seeds £2.25**

Robin F1

SAVOY CABBAGE H

order code 0060

Will produce dark green heads with good flavour for late autumn or winter use. Frost hardy. **30 seeds £2.25**

RED JEWEL CABBAGE

order code 0061

Good quality variety for Spring or Autumn sowing. Drumhead type.

30 seeds £2.00

KALIBOS RED CABBAGE H

order code 0062

An unusual pointed variety. Slow to bolt. May be sown early till mid-summer. Good flavour when eaten raw. **30 seeds £2.00**

Kalibos

DURHAM EARLY CABBAGE H

order code 0063

Will provide dark green spring greens with a medium sized conical head. Frost hardy.

Sow from July to October.

30 seeds £2.00

KILATON F1 CABBAGE

order code 0064

CLUB ROOT RESISTANT

High yielding autumn/winter cabbage with good green colour even after storage.

30 seeds £3.75

CLAPTON F1 CAULIFLOWER

order code 0065

CLUB ROOT RESISTANT

Good quality white curds carried high off the ground to keep clean.

30 seeds £4.25

AALSMEER CAULIFLOWER H

order code 0066

Overwintering type with good white curd.

April heading from a May-June sowing.

30 seeds £2.25

Aalsmeer

DOK ELGON CAULIFLOWER # H

order code 0067

This variety has given many stunning results, very white florets. May be sown from January onwards for Summer & Autumn. Tops for taste.

30 seeds £3.25

Dok Elgon

FLAMENCO F1 CAULIFLOWER

order code 0068

Produces good sized white heads of quality.

May be sown Feb-May. Harvest July-Oct.

25 seeds £3.00

BORIS F1 CAULIFLOWER

order code 0069

Will produce quality curds from summer to early autumn. **25 seeds £3.00**

IGLOO CAULIFLOWER

order code 0070

Produces small white heads. Ideal for containers.

25 seeds £2.50

CRISPUS F1 BRUSSELS SPROUT

order code 0071

CLUB ROOT RESISTANT

Produces small tight buttons with good dark green colour. Frost hardy.

30 seeds £3.75

EARLY 1/2 TALLBRUSSELS SPROUT

Growing vegetables in pots or containers.

Many types of vegetables can be grown in pots or containers. It is useful when space is limited.

A few simple rules apply.

Make sure the container is large enough to support the vegetable.

Use a loam-based compost such as John Innes No.2, or a mix of compost and John Innes No.2. This will ensure a good root system and John Innes has more water retention than a fibre-based compost.

Feed regularly, all pot grown vegetables need more feed than ones in the open ground. Water well during growth, especially during the hot summer months as container grown vegetables will dry out quickly.

Choose the right type of vegetable to grow. Listed below are some we have found very successful.

Spinach, Chard, Tomatoes, Cucumber, Courgette, Squashes (small fruited varieties are best), Kale, Cabbage, Lettuce, Beetroot, Carrots, Rocket, American Land Cress, Parsley, Beans, Peas, Spring Onions, Radish, Turnip.

The large vegetables for exhibition are best grown in the open ground outdoors; they need a lot of attention when grown in containers.

Many trailing plants can be grown up a decorative obelisk or frame and look just as attractive as any flowering plant. Kale, Spinach and Chard are frost hardy and so make a useful winter cut and come again vegetable.

GENERAL RULES FOR FEEDING VEGETABLES.

Root vegetables Not required if the ground is correctly prepared.

Brassica Not required if the ground is correctly prepared

Chilli Peppers When the fruit has started to set and swell well, don't feed too early.

Courgettes, Marrows and Cucumbers When first picking starts.

Onions and Leeks Not required if the ground is correctly prepared.

Onions and Leeks for exhibition. Not required if the ground is correctly prepared. However an extra dressing of general fertilizer can be given.

Peppers and Aubergines When fruit is golf ball size.

Tomatoes under glass. When the fruit on the first truss is pea size.

Tomatoes outdoors. When the fruit on the second truss is pea size.

N.B

PEAT FREE COMPOST NEEDS MORE FEED THAN THE OLD PEAT BASED TYPE.

PLANTS REQUIRE WATER TO TAKE UP THE NUTRIENTS. ALWAYS WATER WELL DURING HOT DRY CONDITIONS.

Tomatoes of every shape, size and colour

Onion seed in production

Why not visit the nursery during APRIL & MAY. We have one of the largest ranges of vegetable plants in the UK.

Our range includes many varieties of Tomato, Sweet pepper, chilli, cucumber plus many unusual vegetables. Our range of brassica covers every taste and season and of course our range of onions and leeks for both the kitchen and the show bench

find us on Facebook. www.facebook.com/mammothvegetables
